

TabLines TWP

Tablet wall mount plug for all available tablets

Specification

Elegant design

The TabLines TWP Tablet Wall Mount Plug for all tablets available on the market presents the tablet in a very minimalistic way. Clear lines, an asymmetrical look, a high-quality powder coating and the milled aluminium as material make the tablet holder a design object on the wall.

Optimised as a wall mount AND for flexible use

The holder is mounted directly on the wall and offers quick and easy insertion and removal of the tablet with one hand. The TabLines TWP wall mount features a minimalist design and makes a high-tech statement in the room. A visually convincing and durable product.

Perfect for Smart Home control

By mounting it in a central location with optional flush-mounted power supply, the tablet becomes the control centre for the Smart Home. With the appropriate applications, lighting management, loudspeakers, TV set, energy options and much more can be controlled and optimised.

Room manager and display panel

In the TabLines TWP wall mount Plug, the tablet can serve as a room manager or display information as a notice board. If it is to be used on the move, it can be easily removed with one hand at any time without tools. This means that it can also be used flexibly at the workplace, in offices and meeting or conference rooms.

Tablet Wallmount Plug product details

Lightning
or USB -C

Installation note

Use with flush-mounted power supply unit:

The flush-mounted power supply unit is mounted in the wall with a hollow wall box (e.g. THWD001). The power supply unit has a USB socket into which one side of the charging cable is plugged (instead of into the charger for the socket). The other side of the cable is plugged into the adapter on the back of the TWP. This allows the plug, which is visible from the front in the tablet holder, to connect to the power and charge the tablet when it is in the holder. The excess length of the cable can be hidden in the recess in the back of the tablet holder, or a short cable can be used.

Use without a flush-mounted power supply unit:

Plug the charging cable of the tablet into the adapter in the back of the holder and let it run through the recesses to the outside. There it can be plugged into a socket as usual.

Key features

Suitable for:	All tablets available on the market
Mounting:	Easy wall mounting with two screws
Material:	Machined aluminium with high-quality powder coating
Alignment:	Portrait and landscape format
Colours:	Black, silver, white or RAL colours on request
